

Tenzin Choda

Computer Science graduate

+975 17736762 | tenzinchoda365@gmail.com | linkedin.com/in/tenzin-choda | github.com/tenze21 | Thimphu, Bhutan

Professional Summary

Highly self-motivated, adaptable and analytical Computer Science graduate with strong foundations in software engineering, algorithms, and complex problem-solving. I am most experienced with building full-stack web applications and web3 applications, blockchain and cybersecurity. Passionate about experimenting and learning new tools and software while bringing fast, scalable software to live.

Education

BSc in Computer Science 2023 - 2027
Gyalpozhing College of Information Technology - Blockchain & Cybersecurity

Relevant Modules:

- Enterprise blockchain development
- Developing decentralized applications
- Ethical hacking
- Secure coding
- Essentials of networking and automation
- Data structures and algorithms

High school 2021 - 2022
Gaselo Higher Secondary School - Science with Pure Mathematics

Skills

Technical:
Programming languages: Javascript/Typescript, C, Java, Solidity, SQL
UI: React
Database: PostgresSQL, SQLite, MongoDB
APIs: REST
DevOps: Linux, Docker, Foundry, Apache Maven.
Integrations: Github, Gitlab

Soft:
- Communication
- Problem solving
- Discipline

Projects

BitMart [React, viem, Node.js, MongoDB, Ethereum] May 2025

Team lead, backend and smart contract developer.

- Web3 e-commerce application that allows for trustless dealing between buyers and sellers through the use of an escrow smart contract.
- As the lead developer and project manager I worked on the backend and smart contract development and deployment.

Verifiable Document Issuer [React, viem, Node.js, MongoDB, Ethereum] April 2025

Team lead, backend and smart contract developer.

- Web3 application for issuing verifiable marksheets to students. Uses merkle tree, hashing, AES encryption and digital signature to allow for the issuance of secure verifiable marksheets. Developed a smart contract to the anchor the proves on-chain for greater trust and immutability.
- Worked on designing the system architecture, backend development, smart contract development and deployment.

Homestay booking [React, Paypal, Node.js, PostgresSQL,] November 2024

Team lead and backend developer

- Allows homestay service providers to register and upload their service details through an intuitive web portal and foreign and native tourists to explore and book homestays.
- Worked on database design, backend development and paypal integration.

Jcrawler [Java, Apache Maven, SQLite] May 2026

Personal project

- Developed a simple web crawler in Java which features crawling the web and searching for pages by keyword. The crawler tokenizes the headers from a web page and stores them in a SQLite database against the URL which can later be queried to search for a page by keyword. The data structures and algorithms used were implemented from scratch and used object oriented design patterns where appropriate.

TinyShell [C, readline] Mar 2026

Personal project

- A hobby project to learn C and understand the working of shell. TinyShell is a simpler version of more feature rich shells like bash. Implemented command execution of both builtin and external programs supports TAB completion and history through readline, allows I/O redirection and supports pipes.

Experience

Instructor - SUI developer workshop September 2025

Gyalpozhing College of Information Technology

- Took participants through the SUI development environment setup and fundamentals of the MOVE programming language.
- Guided participants in programming smart contracts in MOVE and deploying the contract to the SUI testnet.

Member - Media, Marketing & Design(MMD) club August 2023 - June 2027
Gyalpozhing College of Information Technology

- Learned photography and content writing through hands-on experience by volunteering as photographer in college events and writing content for GCITs social media outlets.

Certifications

AWS Cloud Foundations, AWS October 2025

- Acquired fundamental cloud computing and architecture knowledge and learned how to use core AWS services through hands-on labs.

Foundry Fundamentals, Cyfrin May 2025

- Learned to use the foundry development environment to develop, test, debug and deploy solidity smart contracts.

Fundamentals of Zero-Knowledge Proofs May 2025

- Acquired fundamental knowledge of zero knowledge proofs, what it means and how they work.

Introduction to Cybersecurity, Cisco March 2025

- Acquired knowledge of fundamental cybersecurity concepts and attacks, cyber best practices, network vulnerabilities and threat detection.

Awards and Recognitions

Second Runners Up at inter-collegiate programming contest April 2026

- Achieved second runners up at inter-collegiate programming contest organized at college of science and technology by RUB ACM chapter.

Participations

Blockchain Skills Bootcamp & Hackathon May 2026

- Participated in a week-long bootcamp and hackathon held by GovTech in collaboration with the Ethereum foundation.
- Built “sayig - meaning signature in dzongkha” a digital signing application integrated with Bhutan NDI for the general public to sign digital documents and verify signed documents.

Hackathon on Database Management System for legal aid center August 2024

- Took part in an intensive three day hackathon organized by the legal aid center where I worked as the frontend developer for my team and built a prototype database management system using vanilla javascript and Golang backend.

Interests

Reading technical, sci-fi and philosophy books, football, hiking

Languages

Dzongkha	Native
English	Fluent
